BDT Amount to Text Converter

This is a simple C program that converts a numeric Bangladeshi Taka (BDT) amount into words.

Example:

1234567 → "1 crore 23 lac 45 thousand 6 hundred 67 taka only"

Features

- Converts up to 99,999,99,999 BDT
- Bangladeshi numbering system: crore, lac, thousand, hundred, taka
- Repeats input until user exits
- Handles negative amount errors

How to Compile

Using Makefile:

make

Manual:

gcc -o bdt_converter bdt_converter.c

How to Run

Using Makefile:

make run

Manual:

./bdt_converter

Program Flow

1. User enters amount
2. Program prints words
3. Prompts to continue

4. Loops until user exits
